

Commitments for Sprint-1

Sprint goals:

Goal 1: We will have created a detailed and granular requirement specification document. This document will have more specific requirements than stated by the product backlog document which can then be translated to Jira issues

Goal 2: We will have created use-cases for the system. The use-cases will depict top level abstractions for the system, covering its basic features and actors.

Goal 3: We will have created Backlog in Jira which will be worked on during upcoming sprints

Goal 4: We will have pushed the base code to master branch with required checks like the Junit coverage and code smells.

Goal 5: We will have the goals for the next sprint ready. We will have a document specifying the tasks from the backlog that will be worked on during next sprint.

Goal 6: We will have the UML diagrams (class diagrams) for some important features that will be worked on in Sprint-2.
