Overall very good presentation. Would have been better if it was a bit shorter.

As a suggestion, don't write slides as docs and then read the docs.

On the slides entitled What we achieved and could have achieved, this reads as what you did and what you should have done too. Think you meant next steps.

When talking about code quality (e.g. sonarqube), it would have been better to show the sonar report or graphs of issues (e.g. smells over time, coverage over time,...) than talking about it. There's nothing to anchor my thinking.

While the generic scrum picture was helpful, it would have been even better if you customized it to your use as you talked about how the team actually used agile scrum. The code review part felt like it was a little bit of overselling. It came across that everyone reviewed everything. It true, that's impressive, although it's often infeasible once the code dev velocity picks up. Did it really happen or did the presentation mean that everything was reviewed at least once - which is really great too.

The challenges faced material was very good. I appreciate the balance presented. Felt it was honest and not overselling. Huge!

Presentation would be improved if you simply showed the demo to highlight feature rather than list features.

Nice integration of class materials. Seems like a concise and honest assessment. Nice.

The demo video is very good. The multi-screen approach is effective. The presentation is very clear

Good system build demo!!
