Commitments for Sprint-1

Sprint goals:

Goals for B range:

Goal 1: We will have created a detailed and granular requirement specification document. This document will be based on the product backlog document which can then be translated to Jira issues. We will be collecting requirements primarily for features:
1. Login functionality
2. Creating User Profile
3. Creating Groups

Goal 2: We will have created use-cases for the system. The use-cases will depict top level abstraction for the system, covering the actions for actors:
1. Individual User
2. Group User
3. Group Moderator
4. Government

Goal 3: We will have created Backlog in Jira which will be worked on during upcoming sprints. Each person will have created a backlog item on which they will be working on. Each person in the team will have worked an item in the backlog and marked the item done at least once. Each member in the team will have pushed at least one smart commit. We will have created a sprint(Sprint-1) in jira for the ongoing tasks and marked the tasks as done by the end of the sprint.

Goal 4: We will have pushed the base code to master branch with required checks like the Junit coverage and code smells. Each member will have worked on writing unit test cases to achieve the required code coverage for pushing the base code to master.

Goals considered for A range:

Goal 5: We will have the goals for the next sprint ready. We will have a document specifying the tasks from the backlog that will be worked on during next sprint.

Goal 6: We will have the UML diagrams (class diagrams) for the two features that will be worked on in Sprint-2,
1. Login functionality
2. Creating user profiles
